

Wireless Connection Issues

Checking Network Settings for Wireless Connection

In order to connect successfully to the SMUMN Wireless Network you may need to verify that your DNS settings are set to Automatic. Please follow the directions below if you are having difficulty gaining internet access and are NOT in Remediation.

First, open Control Panel > Network and Internet > Network and Sharing Center

Click "Change Adapter Settings"

Then, right click on Wi-Fi and select "Properties"

Wireless Connection Issues

Under the Networking tab, click on "Internet Protocol Version 4 (TCP/IPv4)", then click "Properties"

Wireless Connection Issues

Under the General tab, make sure that it is set to obtain both IP addresses and DNS server addresses **automatically**.

Wireless Connection Issues

If these are already set to Automatic and/or you still do not have internet access, then click "Advanced".

Wireless Connection Issues

Select the **DNS** tab at the top, then make sure that the DNS server addresses box is **blank**. Remove any addresses that may be in there.

Click OK to exit and then retry connection. You may need to restart the computer.

Wireless Connection Issues
